
Attention Mariners

Subsea cables carry over 95% of international communications, with more capacity, speed, and security than satellites, but may be damaged by anchors, fishing gear and other seabed activities. Cables are essential to regional and global communication and are protected by international law.

The approximate routes of Segments 1 and 5 in New Jersey are shown on the attached sketch and position list. Due to possible uncertainty in locations of marine operations, GlobeNet asks anyone involved in subsea projects to keep any equipment or operations that contact the seabed at least ½ nautical mile (900 meters) away from the cables to avoid damage.

If your gear snags something that may be the cable, please do not try to lift it. That could cause risks to the vessel, crew and cable. The weight and tension of the cable could affect vessel stability, and cables carry up to 12,000 Volts of electrical current. It may be necessary to sacrifice your gear. Any action that could damage a subsea cable, intentionally or by negligence, is illegal. Those responsible for such actions are liable for expensive repair costs.
